Career Objective

Full-stack developer with hands-on experience in the MERN stack and Next.js, genuinely curious about how things work under the hood. I tend to dig deeper than the surface fix, enjoy picking up new technologies, and try to leave every codebase a little better than I found it. Comfortable working across the full software development lifecycle and always looking to improve through real problems and good feedback. Hoping to find a team where learning is ongoing and the work actually matters.

Education

Bachelor of Technology, Full Stack Design and Development, Xebia **Expected May 2027**
JECRC University *Jaipur, India*

- CGPA: 7.8

Projects

TrainerSync — *React.js, Node.js, MongoDB, React Native* — GitHub **2024**

- Built a production-grade web and mobile workforce management platform handling trainer evaluation, role-based clock-in/out, attendance, and HR/admin workflows, following agile development practices throughout the software development lifecycle.
- Diagnosed and resolved a geolocation over-fetching bug causing repeated request timeouts on mobile; refactored polling logic in a custom useGeolocation.js hook, reducing timeout failures by 100% and improving overall app reliability.
- Architected a role-based access control system across Admin, HR, and Trainer roles with isolated dashboards and permission scopes, reducing unauthorized access risk across 3 user tiers.
- Delivered cross-platform coverage by shipping a React.js web app and a React Native mobile app on a shared Node.js/MongoDB backend, eliminating code duplication across platforms and cutting maintenance effort by approximately 40%.

Code Notes Linker — *TypeScript, VS Code Extension API* — GitHub **2024**

- Designed and published a VS Code extension that anchors developer notes to exact code ranges, solving the problem of losing context between annotations and source across large codebases.
- Implemented instant navigation on note click, highlighting the original code selection and eliminating manual search time across files, improving developer productivity.
- Built end-to-end using TypeScript and the VS Code Extension API, applying unit testing principles during development and packaging for distribution on the VS Code Marketplace.

Technical Skills

Languages: JavaScript , TypeScript
Frontend: React.js, Next.js, React Native
Backend: Node.js, Express.js, REST APIs
Databases: MongoDB, Mongoose
DevOps and Cloud: Docker, CI/CD Pipelines, GCP (foundational knowledge)
Tools: Git, GitHub, VS Code, Postman
Practices: Agile Methodologies, Software Development Lifecycle, Problem Solving, Team Collaboration

Achievements and Extracurriculars

Hackathon Participant, TeleHealth **2024**
AI-powered symptom checker with doctor appointment booking

- Developed a working AI health application under time pressure, demonstrating problem solving, rapid prototyping, and cross-functional team collaboration skills.

CodeHunt, Winner and Coding Design Competition, 5th Place **2024**
Competitive Programming Events

- Won CodeHunt competitive coding event and ranked top 5 in a design-focused programming competition, demonstrating strong problem solving and communication skills under pressure.

Client Project, Rajasthan Postal Service **2023**
Dynamic Website Development

- Selected to build a dynamic website for a government department, gaining real-world experience in requirements gathering, stakeholder communication, and agile delivery.
